

HANABI P1

Metaphase Chromosome Harvester

ADS Biotec offers the most advanced and state-of-the-art technology in cytogenetics automation. The **HANABI P1** Metaphase Chromosome Harvester is designed for today's cytogenetic laboratories that require increased productivity and throughput — plus it delivers the consistent, professional quality you demand every time.

The **HANABI P1** benchmark technology fully automates the multi-step process of preparing and harvesting metaphase cells derived from blood and bone marrow cell cultures and from other cell suspension cultures for cytogenetic analysis.

The **HANABI P1** is specifically created for small to mid-size throughput, enabling processing of up to 16 suspension cultures per run and eliminating variability compared to manual processing methods. Walk away reliability and low maintenance reduces FTE time associated with the manual harvesting process up to 75%.

The **HANABI P1** can be integrated with additional options such as reagent sensors, waste fluid tank sensors, extra fixative line, the **HANABI SP2** (auto-fixative mixer), and the ultimate HSI feature for accurate data tracking and storage.
