

## HANABI Harvester - HSI

### System Interface for HANABI Harvesters - P1, P2N, P3P

ADS Biotec offers state-of-the-art technology in cytogenetics automation. The **HANABI System Interface (HSI)** is designed for today's cytogenetics laboratories requiring enhanced information data management.

The **HANABI Harvester - HSI** accessory, compatible with the **HANABI Harvesters - P1, P2N, and P3P**, provides an interface that captures harvest data including harvester protocols for retrieval and review. The data can be copied to a USB and/or uploaded to the lab's LIMS. The **HANABI Harvester - HSI** includes a bar code reader for scanning sample tubes as they are placed into the Harvester.

Data for each batch run from the Harvester is assigned a unique run number and is captured by the **HSI** application via a communication port on a tablet computer (included). Protocol parameters and other user defined information for each run is saved in Excel and XML format for later reference and management.

## Features and Benefits

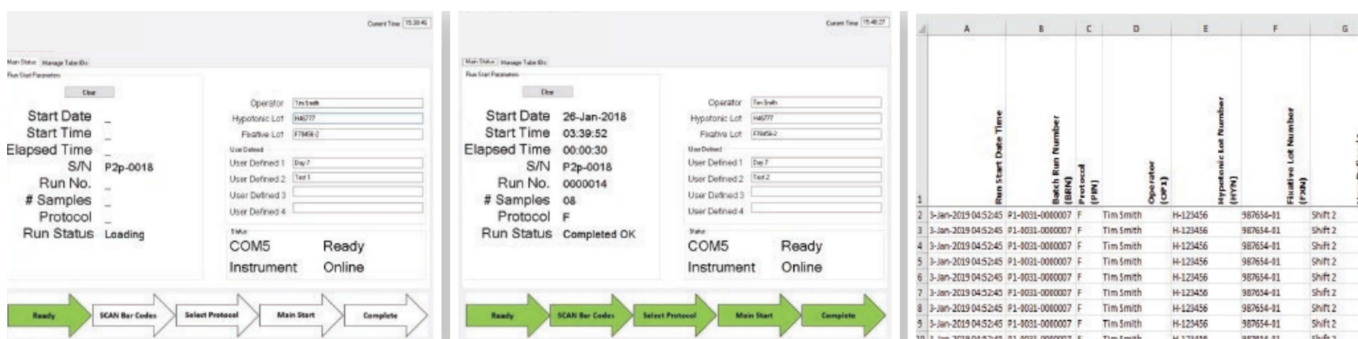

- Increased laboratory productivity
- Easy-to-use software interface
- Access archived data
- Windows 10 Operating System
- Tracing Productivity
- XML format data output
- Customization available
- Compatible with our P1, P2N, and P3P

## Specifications

Item	Description
Operating System	Windows 10 professional
Tablet Computer	Microsoft Surface PRO
Connection cable	RS232C
Bar code scanning system	Omnidirectional reader (1D & 2D)
Storage Data output	Excel and XML file

## Workflow

## Order Information

Product Description	Catalogue Number
HANABI Harvester- HSI System Interface for P1, P3P	LUP114
HANABI-HSI-P2N - HANABI System Interface for HANABI P2N	LP2NA0003
