

HANABI P2P

Metaphase Chromosome Harvester

ADS Biotec offers the most advanced and state-of-the-art technology in cytogenetics automation. The HANABI P2P Metaphase Chromosome Harvester is designed for today's cytogenetic laboratories that require increased productivity and throughput — plus it delivers the consistent, professional quality you demand every time.

The HANABI P2P benchmark technology fully automates the multi-step process of preparing and harvesting metaphase cells derived from blood and bone marrow cell cultures and from other cell suspension cultures for cytogenetic analysis.

The HANABI P2P reduces hands-on time of the entire harvesting process by 75%, allowing time for other specialized tasks, providing increased throughput for your laboratory. Capable of processing up to 24 samples per run and it eliminates variability compared to manual processing methods.

The HANABI P2P can be integrated with additional options such as reagent sensors, waste fluid tank sensors, extra fixative line, the HANABI-SP2 (auto-fixative mixer), and the ultimate HSI feature for accurate data tracking and storage.
